Hotel Room Booking & Front Office Management (Report)

Hotel room booking

Accessing the application……

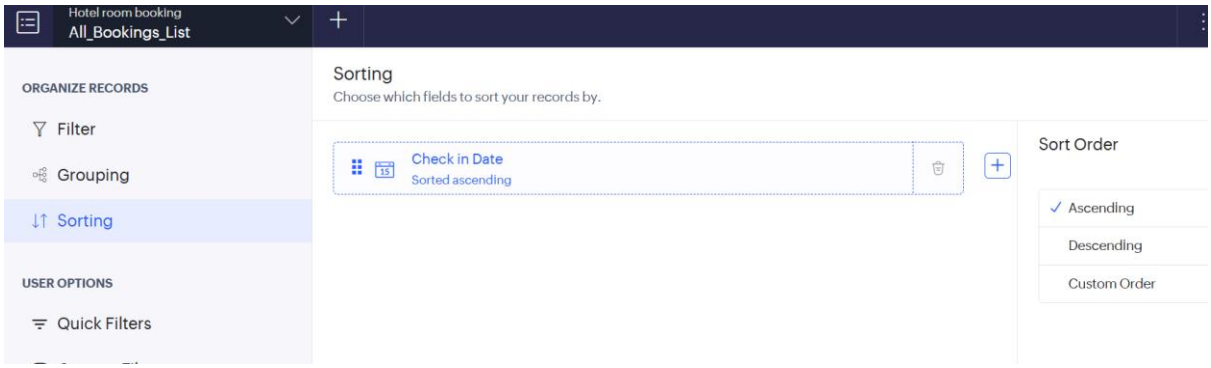

All_Bookings_List Report

This screen displays the booking records stored in the Hotel Booking System. It includes Guest Name, Contact Number, Room Type, Check-In Date, and Booking Status. It helps users view and manage guest booking information in one place.

Sorting Configuration

This screen shows the sorting configuration for the booking report. The records are sorted by Check-In Date in ascending order, so bookings with earlier check-in dates appear before those with later dates. This makes it easier to organize and review upcoming bookings.

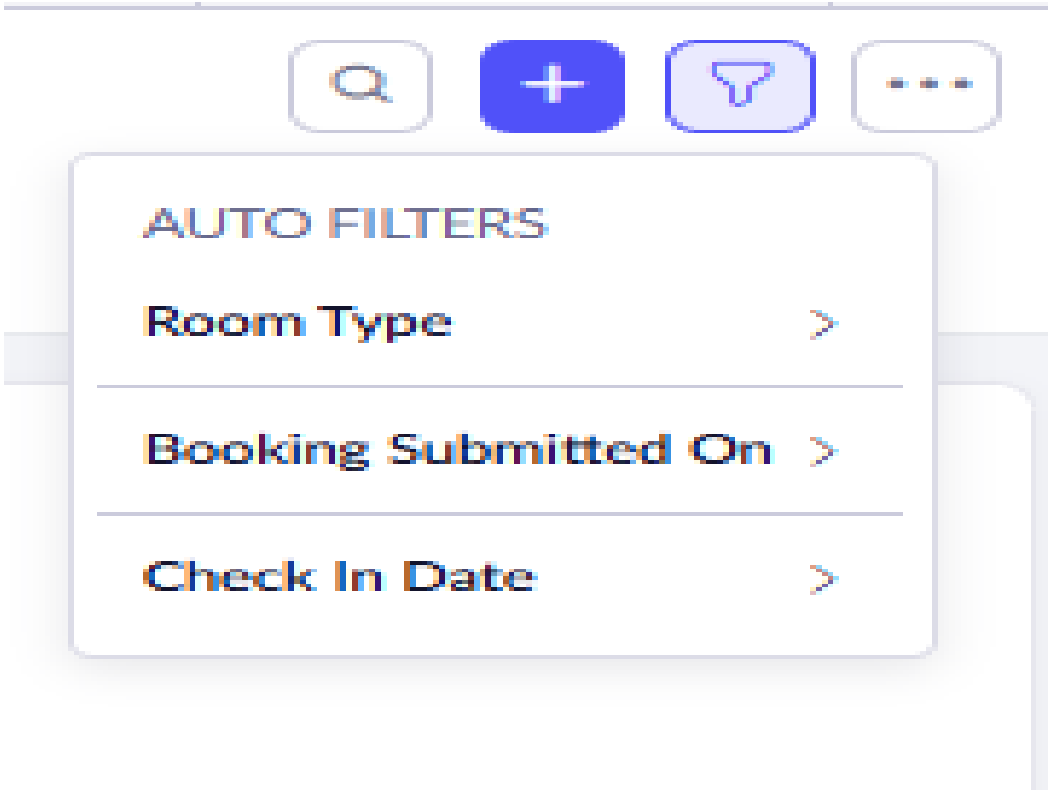

Sorting the dates in ascending order

	booking submitted on
	14-Aug-2026 21:09:25
	14-Aug-2026 21:26:51
	18-Aug-2026 18:59:35
	21-Aug-2026 14:49:38

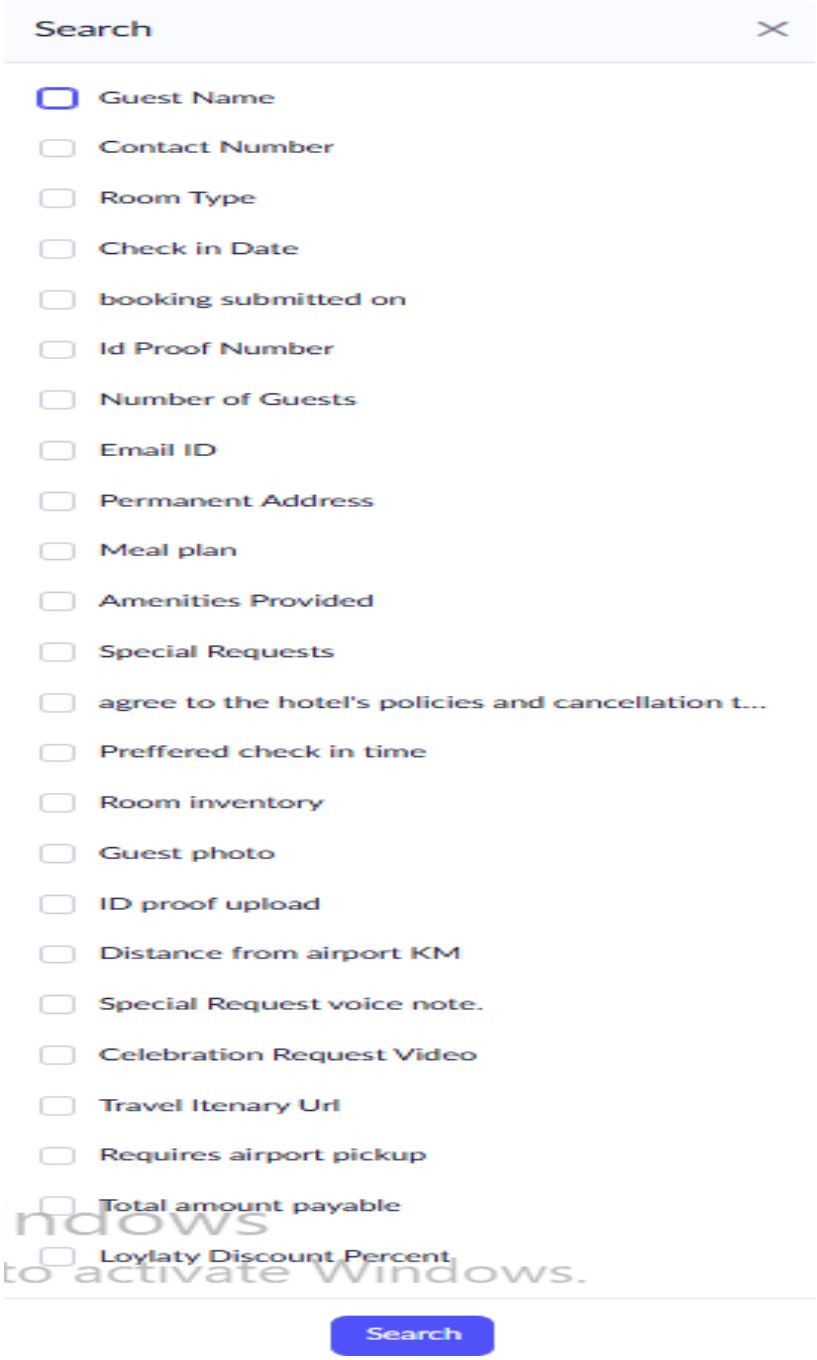

Quick Filters Configuration

This screen displays the quick filters configured for the booking report. The filters allow users to narrow down records based on Room Type, Booking Status, and Check-In Date. This helps users find specific bookings quickly without viewing every record.

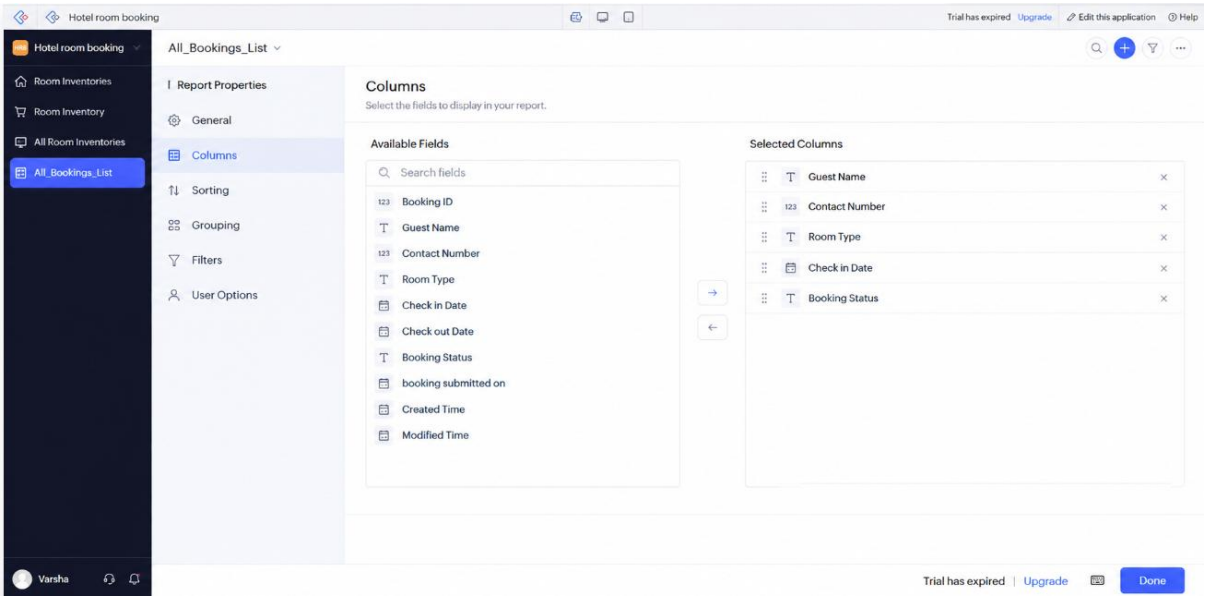

Search Feature

This screen demonstrates the search feature available in the booking report. Users can search for specific booking records using the available search functionality, making it easier to locate the required information efficiently.

Report Column Configuration

This screen shows the selected columns in the All_Bookings_List report. The report is configured to display guest details, contact number, room type, check-in date, and booking status. These fields help users access important booking information in an organized manner.

Overall Summary:

The Hotel Booking System was developed using Zoho Creator to manage guest details and hotel booking records efficiently. The system provides organized reports with essential booking information and includes features such as sorting, searching, and quick filters to make record retrieval easier. The report columns are customized to display relevant details clearly. Overall, the system simplifies booking management, improves data organization, and reduces manual effort.
