Overview of the Sample Data

The sample data consists of five hotel room booking records created to demonstrate the working of the Hotel Room Booking Form. Each record contains guest details such as name, ID proof number, number of guests, email address, contact number, and permanent address. It also includes the guests' room type, meal plan, required amenities, and special requests. The records further capture the check-in date, preferred check-in time, and confirmation of the hotel policies and cancellation terms. The five examples represent different guest requirements and preferences, showing how the Basic Room Booking Form can collect and organize varied booking information in a structured manner.
